An inner housing (12), said housing (12) attached to a nonrotating (13) member of said vehicle.

A clutch pack (8) having a plurality of stationary friction plates (10) nonrotatably connected to said housing (12) and a plurality of drive friction plates (11) nonrotatably connected to said vehicle driveline, said stationary friction plates (10) and said drive friction plates (11) disposed to frictionally link said vehicle driveline to said housing (12) when a clamping load is applied to said clutch pack (8);

A ball ramp actuator (7) for applying a clamping load on said clutch pack (8) comprising : an activation plate (14) adjacent to said clutch pack (8) where axial movement of said activation plate (14) results in a loading and an unloading of said clutch pack (8); a control plate (21) disposed adjacent to said activation plate (14), said control plate (21) and said activation plate (14) having opposed faces provided with circumferentially extending grooves (18), said groove (18) has at least three opposed pairs of grooves (18) having portions of varying depth having a maximum depth at one end and minimum depth at an opposite end rolling elements (19) disposed one in each opposed pair of grooves (18), said grooves (18) on said activation plate (14) and said control plate (21) being arranged so that relative angular movement of said activation plate (14) and said control plate (21) from a starting position thereof causes axial movement of said activation plate (14) away from said control plate (21) to

axially load said clutch pack (8); a transfer ring (16) rotationally connecting said activation plate (14) to said driveline;

A coupling plate (26) coupled to said control plate (21), said coupling plate (26) having a friction surface on a face thereof; an electrical coil (28) wound adjacent to coil housing (31), said coil (28) being electrically energized by a control unit (30) whereupon said coupling plate (26) is electromagnetically attracted into contact with said coil housing (31) and frictionally coupled therewith to provide a rotational retarding torque on said control plate (21).
